Summary

Final-year B.Tech Information Technology student passionate about software development and building practical applications. Experienced in developing web and AI-powered solutions through academic and personal projects. Strong problem-solving skills with a continuous learning mindset and a desire to contribute to impactful software products.

Education

B.Tech | Information Technology | SASTRA University (2023–Present)

CGPA: 9.1387

Technical Skills

Programming: Python, C++, JavaScript, SQL

Frameworks and Libraries: React.js

Databases: MySQL, MongoDB, Supabase

Core CS: Data Structures and Algorithms, OOP, DBMS

AI & Machine Learning: LangChain, Generative AI, Computer Vision

Tools: Git/GitHub, VS Code, Linux (Ubuntu)

Experience

Virtual Internship 6.0 – Infosys SpringBoard (Oct 2025 – Dec 2025)

- Built an image-style transformation application using pre-trained ML models for real-time image cartoonization.
- Developed a backend processing pipeline in Python, including image preprocessing, model inference, and result rendering.
- Designed a user-friendly interface for uploading, processing, and managing image outputs.

Projects

Kyros AI: Multi-Agent Career Preparation Platform

- Developed a 4-agent career preparation platform using React, FastAPI, LangChain, and LLM API for personalized interview preparation.
- Built a document retrieval system to analyze resumes against job descriptions and identify critical skill gaps.
- Designed an automated evaluation module that generates and assesses role-specific mock interviews, including DSA and SQL challenges with real-time feedback.
- Integrated YouTube APIs to recommend targeted learning resources and process video transcripts, enabling continuous AI chat for video-specific doubt clarification.

NutriNet: AI-Powered Food Recognition & Cardiovascular Dietary Assistant

- Built a real-time food detection pipeline using YOLO26, achieving a mAP@50 score of 0.94 for accurate identification of food items from images.
- Developed a cardiovascular risk prediction model using Random Forest, achieving an AUC score of 0.80 on clinical and lifestyle features including blood pressure, cholesterol, glucose, BMI, and physical activity.
- Engineered a hereditary risk scoring system by incorporating family history and generation-based weighting to improve cardiovascular risk assessment.
- Integrated LLM APIs to combine detected food data with predicted cardiovascular risk, delivering personalized dietary recommendations.

Certifications

Foundation: Introduction to LangChain – Python: LangChain Academy — Covered agent development, tool integration, memory, multi-agent workflows, and production-ready AI systems.

Graph Theory Programming Camp: AlgoUniversity — Conquered 17 advanced graph problems under the mentorship of a Codeforces Master.

Python Programming (Parts 1–4) & DBMS (Parts 1–2): Infosys Springboard — Core programming concepts, logical problem-solving, and hands-on SQL experience with relational models.

Leadership and Achievements

Nominated as a Top 50 team for Smart India Hackathon (SIH) based on internal evaluation performance.

Organized a school-wide quiz competition as part of a tech fest, demonstrating leadership, coordination, and teamwork skills.

Awarded an INR 10,000 academic scholarship for consistent academic excellence.
